

# U.S. EPA Issues the Explanation of Significant Differences for Boarhead Farms Superfund Site

On April 15, 2009, the U.S. Environmental Protection Agency (EPA) Region 3 issued an Explanation of Significant Differences (ESD) for the Boarhead Farms Superfund Site located in Bridgeton Township, Bucks County, Pennsylvania. The ESD addresses two changes to the groundwater cleanup standards for the Site. Specifically, the ESD 1) establishes the Maximum Contaminant Level (MCL) of 2 micrograms per liter ( $\mu\text{g/L}$ ) as the groundwater cleanup standard for vinyl chloride, and 2) adopts the new MCL of 10  $\mu\text{g/l}$  as the groundwater cleanup standard for arsenic.

**The ESD is available online at <http://www.epa.gov/arweb>. Select 'PA' for State, 'Boarhead Farms' for Site Name, and leave AR Type blank. Select 'Search,' and on the next screen select 'Search Results'.**
